Study description: This dataset provides data on the consumption of sugar-sweetened beverages in the state of California. It includes the consumption patterns, including frequency and volume of the intake of sugar-sweetened beverages among residents in California.

The data was split into 5 columns, which were year, age group, category, type, and mean servings.

Year: the data was covered from the years 2012-2013

Age Group: Divided into Adults, Adolescents, and Children.

Category: Split up into gender, race, income, Physical Activity, Overweight Status, CalFresh Status, Education, Income, and Age.

Type: showed results from the categories above. Example: Income is \$50,000.

Mean Servings: Included the mean servings of sugar-sweetened beverages. Example: 0.7
